When attaching 'WeightoolBox' to the John Deere tombstone weight, please ensure that the shelf is fully at home on top of the tombstone, in the same way that the John Deere big pack fits onto the tombstone weight. When that is home, position the retaining bracket into the 30mm clearance hole cast into the tombstone weight and fit the 4 20mm bolts through the holes in the rear of the weightoolbox. If any of 30mm pin on the retaining bracket is visible when the retaining bolts have been tightened it may be necessary to adjust the 20mm locking bolts, either side of the main retaining pin to prevent any vertical movement of the weightoolbox.
